DC Advisory advised Datagram on its sale to Singlehop

Hosted Private Cloud Provider Extends Services and Customer Base, Adds Strategic East Coast Data Centers Through Its Second Acquisition in a Year

CHICAGO, IL and NEW YORK, NY—(Marketwired – May 20, 2015) – SingleHop, a leading provider of on-demand hosted private clouds and managed hosting, today announced the acquisition of New York-based infrastructure solutions provider Datagram. This acquisition is SingleHop’s second such announcement this year, following that of Orlando-based Server Intellect in March, which added a range of Microsoft capabilities, including Hyper-V support, to SingleHop’s enterprise private cloud offering. The strategic acquisition of Datagram paves the way for SingleHop to expand its hosted private cloud services into the Northeast market with additional data centers in New York and Connecticut.
