DC Advisory advised Cyberoam Technologies on its sale to Sophos

Expands Network Security, UTM and Next-Generation Firewall Portfolio

OXFORD, UNITED KINGDOM–(Feb 10, 2014) –Sophos announced today that it has acquired Cyberoam Technologies, a leading global provider of network security products. The acquisition expands and deepens Sophos' already significant product portfolio in network security, by combining Cyberoam's Unified Threat Management (UTM), next-generation firewall and network security expertise with Sophos' existing award-winning network security solutions in UTM and wireless security.

Sophos and Cyberoam create a winning combination at the right time, in the right product markets and in all the right geographies. Cyberoam has built a strong reputation as an aggressive and nimble innovator in the network security market, and like Sophos, has a 'channel-first' approach and reputation for delivering top-notch service and support. The acquisition expands and accelerates our network security roadmap to grow our presence in UTM, advanced threat protection, wireless and next generation firewall – some of the fastest growing markets in all of IT. This also continues our focus of providing exciting opportunities to grow our channel partners and customers.

Kris Hagerman
Chief Executive Officer for Sophos
